

The persuasive low-cost solution for radiological practices and clinical use

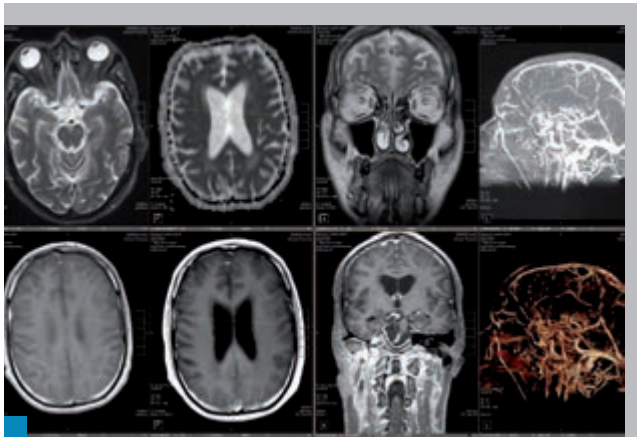

Visualization on the hospital bed with ultra-mobile devices

VIMED® WEB-ENTRY makes possible transmission, visualization and diagnostic reading for medical image data over network in intranet or internet.

The trend in radiology is going away from film and paper based radiology practise to an integrated, electronically managed ward.

To support radiological wards in orientation towards the requirements of progressive communication and teleradiology we offer advanced technology at a „fair“ price with VIMED® WEB-ENTRY.

More than 1000 installations worldwide designate VIMED®, with other OEM versions, as world market leader in the area of the web-based image management.

■ Images for assigners

VIMED® WEB-ENTRY is a sophisticated system for user management ensuring the assigning doctor to view only data of their own patients. For image viewing is only one PC with Internet Explorer required.

■ Images for medical round

All images could be visualized on the ultra-mobile devices during medical round.

■ Expert opinion

With the web-based VIMED® System, it is possible to grant colleagues limited access (second opinion). The image data can be accessed via a telephone or internet connection.

■ Patient CD

VIMED® supports the creation of data carriers based on the DICOM Standard and the writing of offline-CD's/DVD's with the Rimage Producer Station. Media contain a viewer for displaying the DICOM images which will start automatically when inserting the CD.

The main features of VIMED® WEB-ENTRY

- Quick access to image information
- User-friendly through easy management of the complete system
- Low-cost solution for viewing and processing images
- Possible to work with many monitors
- No special software required
- High data security using SSL encryption
- Visualization on ultra-mobile devices via WiFi and UMTS, HSPA or 4G

Advantages of VIMED® WEB-ENTRY

- Reduction of fixed costs for film and chemicals
- No costs for storage and transport of medical imaging material
- Reduced processing time of patients
- Option to burn images directly on CD/DVD
- „Paperless office“ through electronic patient files
- Comfort increase for patients
- Flexible product (can be customized individually)

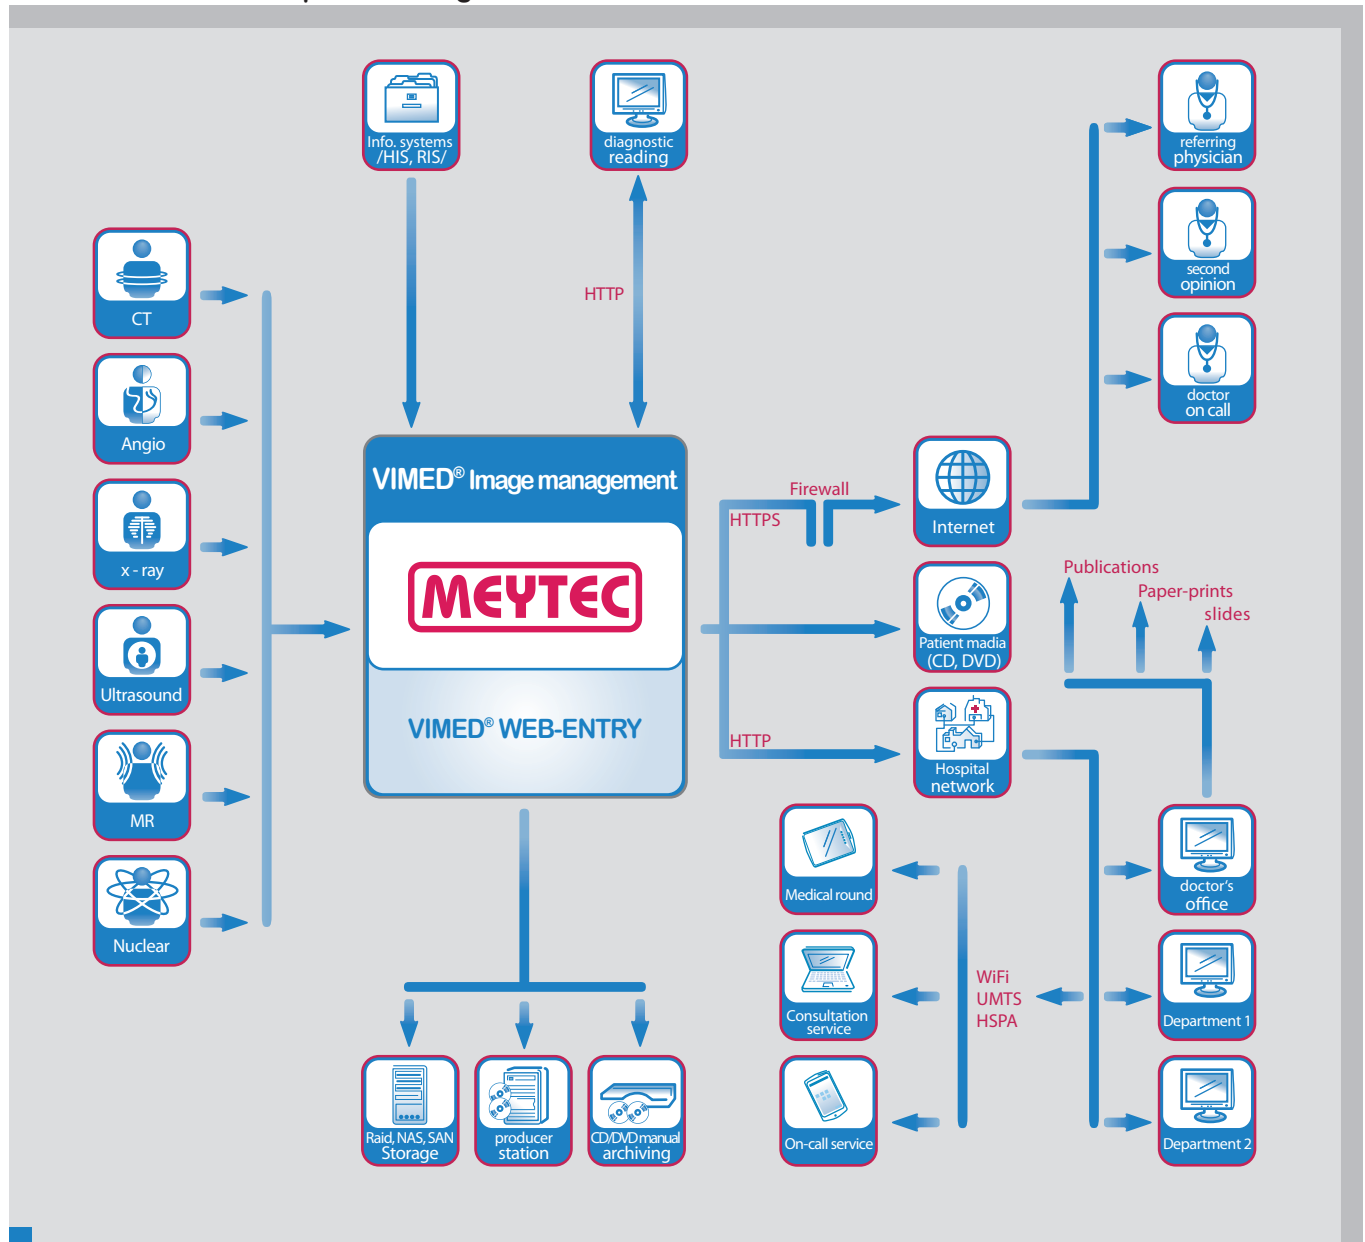

VIMED® WEB-ENTRY Basis package

- Licence for up to three simultaneous users (extendable)
- Licence for 250 GB data storage
- Licence for ultra-mobile device (App for iPad)
- Delivered as a VMware virtual machine

Optional

- High performant hardware Server for executing the virtual machine
- Rimage Producer Station

VIMED® WEB-ENTRY Operation diagram

VIMED® WEB-ENTRY is a telemedicine system from the MEYTEC GmbH Medizinsysteme and a part of the VIMED® 2000 system family
